

TEMPERATURE SUM

This software allows realizing easily all computations based on temperature sum. The computations can be realized on hourly or daily data basis.

This application needs Pulsowin using version 2.0 or more.

Models:

The user can create or modify models including computation parameters which can be called again later at the time of each using. A set of models is supplied with the software.

Computation possibilities

- Temperature sum superior to one basis
- Temperature sum inferior to one basis
- Temperature sum between two basis

Applications:

- Fight model against destructive insects
- maize maturity
- thermic genius
